

## CARA MEMBUAT HALAMAN BOOTSTRAP 5 LOGIN LARAVEL

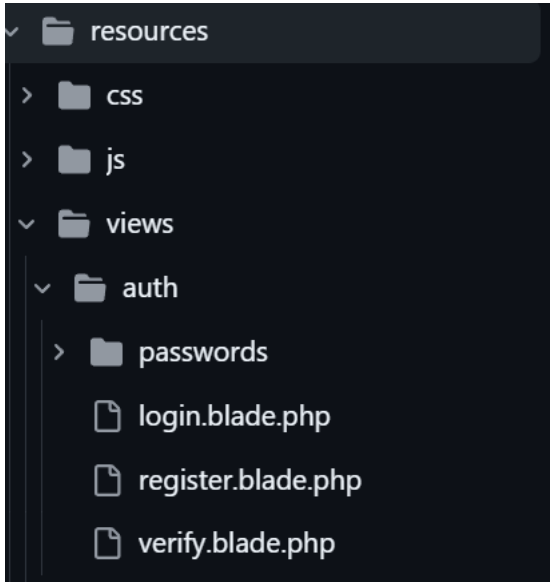

Ketik di terminal

***composer require laravel/ui***

kemudian ketik di terminal

***php artisan ui bootstrap --auth***

tunggu sampai selesai: akan muncul folder resource -> views -> auth

jika memiliki tema login

di input di tambahkan di halaman login.blade.php

**name="email" value="{{ old('email') }}" required**

```
1. @error('email')
2.     <span class="invalid-feedback" role="alert">
3.         <strong>{{ $message }}</strong>
4.     </span>
5. @enderror
6.
```

**name="password" required**

```
1. @error('password')
2.     <span class="invalid-feedback" role="alert">
3.         <strong>{{ $message }}</strong>
4.     </span>
5. @enderror
6.
```

Di folder routers -> web.php

//untuk memunculkan halaman login setting pertama

Route::get('/', function () { return redirect('login') });

Route::get('/', function () { return redirect('\*\*\*\*') }); // nanti sesuaikan dengan menu pertama login misal Route::get('/', function () { return redirect('/biodata') });

route::middleware(['auth'])->group(function () {

\*\*\*

});

Apapun route code harus login terlebih dulu

Auth::routes([

'register'=> 'false', // jika false mematikan register

'reset'=> 'false', // jika false mematikan reset

'verify'=> 'false', // jika false mematikan verify

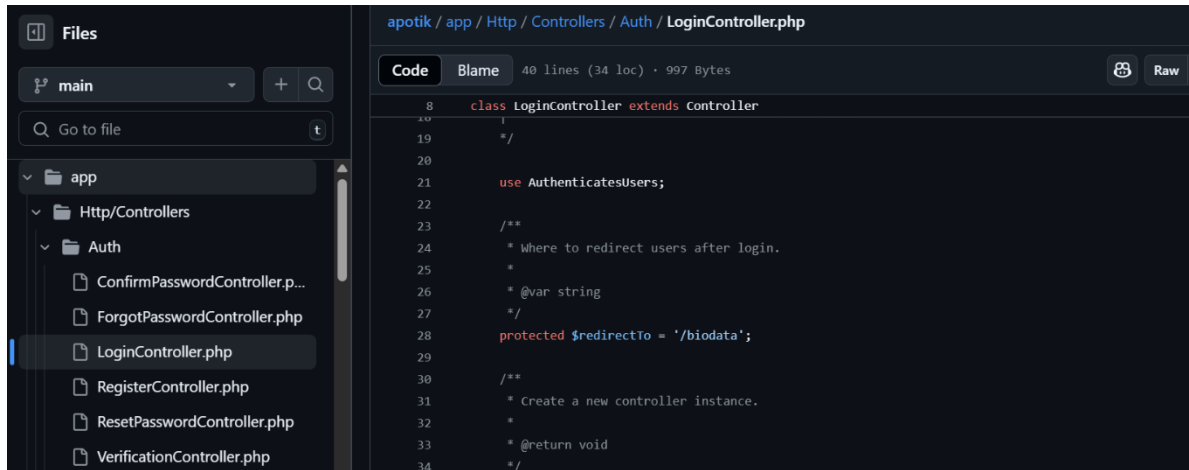

]);

**Menambahkan menu logout di halaman template.master**

```
1.      <li class="nav-item">
2.          <a class="nav-link" href="{{ route('logout') }}"
3.          onclick="event.preventDefault();
4.              document.getElementById('logout-form').submit();">
5.              {{ __('Logout') }}
6.          </a>
7.
8.          <form id="logout-form" action="{{ route('logout') }}" method="POST" class="d-none">
9.              @csrf
10.          </form>
11.      </li>
```

```
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <title>Bootstrap Example</title>

19                         <a class="nav-link active" href="/pelanggan">pelanggan</a>
20                     </li>
21                     <li class="nav-item">
22                         <a class="nav-link" href="{{ route('logout') }}"
23                         onclick="event.preventDefault();
24                             document.getElementById('logout-form').submit();">
25                             {{ __('Logout') }}
26                         </a>
27
28                         <form id="logout-form" action="{{ route('logout') }}" method="POST" class="d-none">
29                             @csrf
30                         </form>
31                     </li>
32                 </ul>
33             </div>
34         </nav>
35
36     </div>
37     @yield(section: 'content')
```

Buka di Controller Auth cari LoginController.php

protected \$redirectTo = '/ \*\*\*\*'; ubah sesuai dengan projek di buat agar setelah login menuju halaman pertama di halaman admin

### Langkah 1 :

1. Buat controller di terminal : *php artisan make:controller UserController* ("tidak Perlu membuat model ya karena sudah di buat default dari laravel).
2. Buat Route user di web.php

```
Route::get(uri: '/user', action: [UserController::class, "index"])->name(name: "user.index");
Route::get(uri: '/user/create', action: [UserController::class, "create"])->name(name: 'user.create');
Route::post(uri: '/user', action: [UserController::class, "store"])->name(name: 'user.store');
Route::delete(uri: '/user/{id}', action: [UserController::class, "destroy"])->name(name: 'user.destroy');
Route::get(uri: '/user/{id}/edit', action: [UserController::class, "edit"])->name(name: 'user.edit');
Route::put(uri: '/user/{id}', action: [UserController::class, "update"])->name(name: 'user.update');
```

- ### 3. Masuk ke UserController

Isi kan code

```

1. <?php
2.
3. namespace App\Http\Controllers;
4.
5. use App\Models\User;
6. use Illuminate\Http\Request;
7. use Illuminate\Support\Facades\Hash;
8.
9. class UserController extends Controller
10. {
11.     public function index()
12.     {
13.         $data = User::latest()->paginate(10);
14.         return view('user.index', compact('data'));
15.     }
16.
17.     public function create()
18.     {
19.         return view('user.create');
20.     }
21.
22.     public function store(Request $request)
23.     {
24.         $request->validate([
25.             'name' => 'required|string|max:255',
26.             'email' => 'required|string|email|max:255|unique:users,email',
27.             'password' => 'required|string|min:6',
28.         ]);
29.
30.         User::create([

```

```

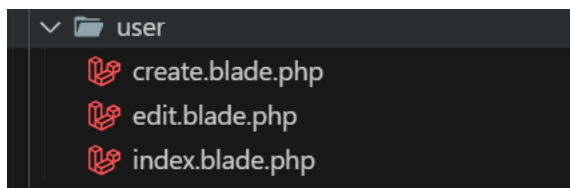

31.         'name' => $request->name,
32.         'email' => $request->email,
33.         'password' => Hash::make($request->password),
34.     ]]);
35.     return redirect()->route('user.index')->with('message', 'berhasil di tambah');
36. }
37.
38. public function destroy($id)
39. {
40.     User::where('id', '=', $id)->delete();
41.     return redirect()->route('user.index')->with('message', 'berhasil di hapus');
42. }
43.
44. public function edit($id)
45. {
46.     $data = User::find($id);
47.     return view('user.edit', compact('data'));
48. }
49.
50. public function update(Request $request, $id)
51. {
52.     $request->validate([
53.         'name' => 'required|string|max:255',
54.         'email' => 'required|string|email|max:255|unique:users,email,' . $id,
55.         'password' => 'nullable|string|min:6',
56.     ]);
57.
58.     if ($request->password == null) {
59.         User::where('id', '=', $id)
60.             ->update([
61.                 'name' => $request->name,
62.                 'email' => $request->email,
63.             ]);
64.     } else {
65.         User::where('id', '=', $id)
66.             ->update([
67.                 'name' => $request->name,
68.                 'email' => $request->email,
69.                 'password' => Hash::make($request->password),
70.             ]);
71.     }
72.     return redirect()->route('user.index')->with('message', 'berhasil di update');
73. }
74. }
75.

```

## Langkah 2:

Buat folder user berisi file index.blade.php, create.blade.php, dan edit.blade.php

di folder *resource -> view -> user*

## File: index.blade.php

```

1. @extends('temple.master')
2. @section('content')
3.
4.     <div class="container">
5.         <div class="row">
6.             <div class="col-md-5">
7.                 @if(session()->has('message'))
8.                     <div class="alert alert-success">
9.                         <strong>Success!</strong> {{ session()->get('message') }}
10.                    </div>

```

```

11.         @endif
12.     </div>
13. </div>
14. <div class="row">
15.     <div class="col-md-1">
16.         <a href="{{ route('user.create') }}" class="btn btn-primary mb-3">tambah</a>
17.     </div>
18. </div>
19. <div class="row">
20.     <div class="col-md-12">
21.         <table class="table table-bordered">
22.             <thead>
23.                 <tr>
24.                     <th>no</th>
25.                     <th>nama </th>
26.                     <th>email</th>
27.                     <th>aksi</th>
28.                 </tr>
29.             </thead>
30.             <tbody>
31.                 @foreach ($data as $item)
32.                     <tr>
33.                         <td>{{ $loop->iteration + $data->firstItem() - 1 }}</td>
34.                         <td>{{ strtoupper($item->name) }}</td>
35.                         <td>{{ $item->email }}</td>
36.                         <td>
37.                             <form onsubmit="return confirm('Apakah Anda Yakin ?');"
38.                                 action="{{ route('user.destroy', $item->id) }}" method="POST">
39.                             <a href="{{ route('user.edit', $item->id) }}" class="btn btn-sm btn-primary">EDIT</a>
40.                             @csrf
41.                             @method('DELETE')
42.                             <button type="submit" class="btn btn-sm btn-danger">HAPUS</button>
43.                         </form>
44.                     </td>
45.                 </tr>
46.             </tbody>
47.         @endforeach
48.     </div>
49. </table>
50.     {{ $data->links() }}
51. </div>
52. </div>
53. </div>
54. </div>
55. @endsection
56.

```

#### File: create.balde.php

```

1. @extends('temple.master')
2. @section('content')
3.
4.     <div class="container">
5.         <div class="row">
6.             <div class="col-md-12">
